

01190 Little Egret (*Egretta garzetta*)

Little Egret. Spring. Adult (10-III).

LITTLE EGRET (*Egretta garzetta*)

IDENTIFICATION

55-65 cm. Wholly white plumage; dark bill; black legs with yellow feet; in **breeding** plumage with long ornamental feathers on chest, mantle, scapulars and head.

Little Egret: pattern of ornamental feathers on the nape and legs.

SIMILAR SPECIES

Recalls a **Cattle Egret**, which has buff crown, yellow bill and legs with similar colour than feet. **Great Egret** is a bigger heron (85-102 cm).

Cattle Egret: non breeding plumage.

SEXING

Plumage of both sexes alike.

AGEING

4 types of age can be recognized:

Juvenile similar to **adult** but without ornamental feathers; upperparts and scapulars with short and rounded feathers; brown bill; bare skin on face grey-blue; legs green-yellow; iris grey-blue; fresh plumage with only one generation of wing feathers.

2nd year spring with **juvenile** flight feathers and tail; mantle and scapulars with ornamental feathers less developed than **adults**; breast feathers only slightly elongated and lanceolated; feet green-yellow; iris dull yellow; bare skin on face grey-blue.

Adult in spring with long neck and wing plumes; with two ornamental feathers well developed on nape; black bill; iris yellow; bare skin on face grey with trace of yellow toward the eye; legs black; feet bright yellow. In **autumn** with ornamental feathers on upperparts shorter and less numerous; lacking the long ornamental feathers on nape.

MOULT

Complete **postbreeding** moult; starting in breeding areas and finished in winter quarters. Partial **postjuvenile** moult confined to body feathers, usually in wintering quarters. Both types of age have a **prebreeding** moult reduced to ornamental feathers.
