Gadwall. Summer. Non breeding plumage. Adult. Male (06-VIII)

**GADWALL** (*Anas strepera*)**IDENTIFICATION**

46-56 cm. **Male** in winter brown-grey; white underparts; black undertail coverts; grey wings with a chestnut band; white and black speculum. **Female** brown, with dark mottled and streaked; speculum similar to **male**.

**SIMILAR SPECIES**

**Male** with unmistakable plumage. Pattern of the speculum differs the **female** from other brown ducks.

**SEXING**

**Male** in **breeding** plumage unmistakable, with grey colour; dark bill; vermiculated grey flanks; chestnut median wing coverts; vermiculated scapulars and black undertail coverts. **Male** in **non breeding** plumage resembles a **female** but the orange bill lacks black spots; with large speculum and extensive chestnut on median coverts; brown patches on upper scapulars; flanks with V-shaped marks (**CAUTION:** not always, there is a little individual variation), white undertail coverts irregularly spotted. **Female** brown; orange bill usually with black spots; buff flanks with U-shaped brown marks (**CAUTION:** not always, there is a little individual variation); median wing coverts with only small traces of chestnut; scapulars never vermiculated, with U-shaped marks (**CAUTION:** not always, there is a little individual variation); brown undertail coverts mottled blackish.

Gadwall. Sexing. Pattern of bill. Top breeding male; middle non breeding male; bottom female

Gadwall. Sexing. Pattern of flankl. Top breeding male; middle non breeding male; bottom female

Gadwall. Sexing. Pattern of undertail coverts. Top left breeding male; top right non breeding male; left female

**AGEING/SEXING**

It is unlikely to find **juveniles** in Aragon, so only 2 age groups can be recognized:

**1st year autumn/2nd year spring** resembles **adults** but with retained wing and tail feathers which will be eroded. **Male** rufous only on a part of median coverts; lesser coverts not vermiculated, with some pale bars and pale edge; black greater coverts always exceeding the white speculum; 5th to 7th greater coverts with whitish tips and broad edge, sometimes with a bit of black or rufous on the outer web. **Female** with rufous rarely present on median coverts, which have 1 or 2 pale bars and a pale fringe; lesser coverts always with a creamy band; dusky black greater coverts never exceeding the white speculum; 5th to 7th greater coverts with whitish tips and broad edge, never with a bit of black or rufous on the outer web.

**Adult** with fresh flight and tail feathers. **Male** in **breeding** and **non breeding** plumage with a lot of rufous lesser and median coverts; lesser coverts closest to the leading edge of the wing finely vermiculated, sometimes plain pale grey; 5th to 7th greater coverts with a lot of black or rufous on the outer web without whitish edge; outer web of the innermost greater coverts deep black without pale edge. **Female** with median coverts with pale edge and with rufous only in a few feathers; lesser coverts always with a pale edge and never vermiculated; dark greater coverts always exceeding the white speculum; 5th to 7th greater coverts with white tips and little or no black or rufous on the outer web; outer web of the innermost greater coverts black sometimes with pale edge.

Gadwall. Ageing. Wear of tail feathers (03-XI): left adult; right 1st year.

Gadwall. Ageing. Male. Pattern of lesser wing coverts: top adult; bottom 2nd year.

Gadwall. Ageing. Male. Pattern of wing coverts: top adult; bottom 2nd year.

Gadwall. Ageing. Female. Pattern of lesser wing coverts: top adult; bottom 2nd year.

Gadwall. Ageing. Female. Pattern of wing coverts: top adult; bottom 2nd year.

## MOULT

Complete **postbreeding** moult acquiring **eclipse** plumage, usually finished in July (**males**) or August (**females**). Partial **postjuvenile** moult confined to body and sometimes tail feathers, usually finished in October. Both types of age, starting in September, have a partial **prebreeding** moult involving body feathers to acquire **breeding** plumage.

**PHENOLOGY**

I	II	III	IV	V	VI	VII	VIII	IX	X	XI	XII

**STATUS IN ARAGON**

Very few wintering species. Recorded as a breeder in the Gallocanta basin when the area had suitable conditions for the species.
