Mallard. Spring. Breeding plumage. Adult. Male (01-IV).

MALLARD (*Anas platyrhynchos*)**IDENTIFICATION**

50-65 cm. **Male in breeding** plumage with 50-65 cm. **Male in breeding** plumage with green head and neck; grey upper and underparts; central pair of tail feathers greatly elongated and curved. **Non-breeding male, female and 1st year** birds buff, mottled and dark streaked. In **all plumages** wing speculum blue bordered black and white.

Mallard. Pattern of speculum.

SIMILAR SPECIES

Male in breeding plumage unmistakable. **Female, male in non-breeding** plumage and **1st year** birds easily recognized by pattern of wing speculum.

SEXING

Male in breeding plumage unmistakable with green head, purple brown breast and grey body. **Adult male in non-breeding** plumage and **1st year male** quite similar to **female** but with green or yellow bill; tertial coverts without white tip. **Adult female** and **1st year female** with dark patches on bill; tertial coverts with white tip. In **non-breeding** plumage, **adult males** can also be recognized by their usually red brown breast and only softly streaked (**CAUTION:** pattern variation in this species is very high).

Mallard. Sexing. Breeding plumage. Pattern of head and bill: left male; right female.

Mallard. Sexing. Non-breeding plumage. Pattern of head and bill: left male; right female.

Mallard. Sexing. Non-breeding plumage. Pattern of tips of tertial coverts: left male; right female.

AGEING

3 age groups can be recognized:

1st year summer with grey-brown edge on the outermost tail feather (till be moulted late August); tertial coverts with triangular tip; black patch on tip of 4th, 5th and 6th greater coverts rounded; the outermost greater covert with small white patch.

1st year autumn/2nd year spring with juvenile flight feathers and greater and median coverts retained; **females** usually retain one or more tertials; both sexes can retain tertial coverts, which are worn with moult limit with the moulted neighbor feathers.

Adult with white edge on the outermost tail feather; tertial coverts with rounded tip; black patch on tip of 4th, 5th and 6th greater coverts angular; the outermost greater covert with large white patch.

Mallard. Ageing. Non-breeding plumage. Male. Pattern of the outermost tail feather: left adult; right juvenile.

Mallard. Ageing. Non-breeding plumage. Pattern of the tips of the tertial coverts: left adult; right juvenile.

Mallard. Ageing. Male. Pattern of the outermost greater coverts: top adult; bottom juvenile.

Mallard. Ageing. Female. Pattern of the outermost greater coverts: top adult; bottom juvenile.

MOULT

Complete **postbreeding** moult, acquiring **non-breeding** plumage, usually finished in August in **males** and late September in **females**. Partial **postjuvenile** moult confined to body feathers, scapulars, flank and tail, finished between August and October. Both age groups have a partial **prebreeding** moult acquiring **breeding** plumage and moulting tertials and tail.
