Black Kite. Spring. Adult (08-IV).

BLACK KITE (*Milvus migrans*)

IDENTIFICATION

59-66 cm. Brown upperparts with feathers edged pale; underparts reddish brown, streaked; pale crown with dark streaks; dark brown wings, with whitish patch on base of primaries; barred pale brown tail; black bill; yellow cere.

Black Kite. Adult: pattern of head, breast and tail.

SIMILAR SPECIES

The only raptor with forked tail is **Red Kite** which has paler plumage tinged reddish.

Red Kite

SEXING

Plumage of both sexes alike. Wing length is an useful characteristic only in extreme birds: **male** usually with wing shorter than 430 mm; **female** usually with wing longer than 475 mm. **CAUTION:** overlap in wing length is so large that it is not a completely reliable characteristic for individual specimens.

AGEING

5 age groups can be recognized:

Juvenile with very fresh plumage; head and upperparts feathers with largely pale edged; upper and underwing coverts with pale edge; greater and primary coverts with pale tips forming a thin line across the wing; breast feathers light brown with a dark shaft streak; dark brown iris.

2nd year spring with **juvenile** plumage but less contrasted due to wear; body with some **adult**-type feathers; dark brown iris.

2nd year autumn with two ages of feathers, with brownish and worn **juvenile** feathers contrasting with darker and fresh moulted ones; dark eyes.

3rd year only in birds retaining some unmoulted **juvenile** flight feathers, which are very old and worn, or **2nd year** feathers, shorter and pointed than **adult** type; iris light brown.

Adult with greyish head with thin dark streaks; neck and upperparts with grey brown feathers without pale edges; upper and underwing coverts without pale edge; greater and primary coverts without pale tips forming a line; breast feathers dark brown with a dark central streak; pale iris. **CAUTION:** it is necessary more information about when **adults** have pale iris and how important is individual variation.

Black Kite. Ageing. Pattern of head and iris colour: left adult; right juvenile.
