Hobby. Adult. Male (18-VI).

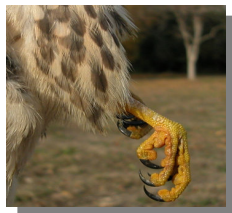

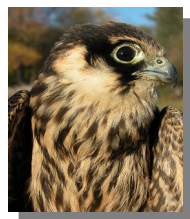

## EURASIAN HOBBY (*Falco subbuteo*)

### IDENTIFICATION

30-35 cm. **Adult** with slate grey upperparts; pale underparts; dark moustache; vent and thighs reddish; grey tail; pale underwing feathers. **Juveniles** dark brown and streaked; lacking red thighs.

Hobby. Adult: pattern of breast, thighs and upperparts.

Hobby. Juvenile: pattern of breast, thighs and upperparts.

### SIMILAR SPECIES

**Adult** can be separated from the other small falcons for its moustache and reddish underparts; **juvenile** recalls a **Peregrine Falcon** (38-45 cm) which is bigger and with greyer upperparts.

Peregrine  
Juvenile.

Falcon.

### SEXING

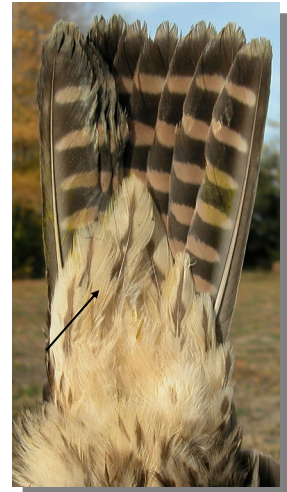

It's possible to sex the smallest **males**, with a wing shorter than 245 mm. (**CAUTION:** birds with longer wings belong to both sexes). In **adults**, **male** usually tends to have deep blue grey upperparts; thighs and undertail coverts unstreaked or with poorly marked streaks; deep reddish underparts. **Female** usually tends to have dull blue grey upperparts; thighs and undertail coverts streaked; underparts with duller reddish (**CAUTION:** sexing sometimes difficult due to overlap). In **juveniles**, **male** usually with marks on undertail coverts small and unfrequent; the ochre on underparts with a pitch of orange; on 3rd-5th tail feathers the light band proximal to the subterminal band is usually interrupted at the shaft by a fine dark stripe. **Female** usually with marks on undertail coverts large and frequent; the ochre on underparts without orange tinge; on 3rd-5th tail feathers the light band proximal to the subterminal band is usually interrupted at the shaft by a broad dark stripe. Pattern of the 3rd-5th tail feathers is useful to sex the **2nd year** birds if **juvenile** rectrices have been retained (**CAUTION:** sexing of **juveniles** and **2nd year** birds are not always possible due to overlap of some characteristics, so only extreme birds must be sexed and only when have all described patterns).

## AGEING

4 age groups can be recognized:

**Juvenile** with feathers of wing and upperparts black-brown with rufous edge; undertail coverts and thighs pale buffish; central pair of tail feathers with rufous tips, rest of tail feathers barred and tipped rufous; greater and primary coverts tipped rufous; grey bluish cere and ocular ring.

**2nd year** with plumage similar to **adult** or with some mixed **juvenile** brown feathers; tail usually with both **adult** and **juvenile** feathers; greater coverts and flight feathers **juvenile** (in summer sometimes with some **adult** feathers just moulted).

**Adult** with feathers of upperparts blue-grey; undertail coverts and thighs reddish; central pair of tail feathers without rufous tips; tail feathers tipped greyish; greater and primary coverts without rufous tips; yellow cere and ocular ring.

**CAUTION:** some **adult** birds can retain secondaries with **adult** pattern but never have **juvenile** wing coverts.

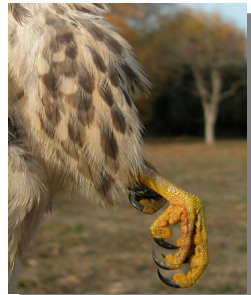

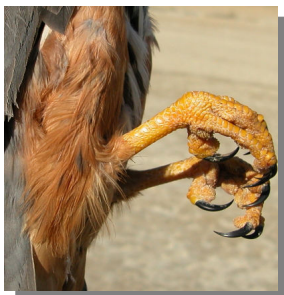

Hobby. Ageing. Pattern of undertail coverts: left adult; right juvenile.

Hobby. Ageing. Pattern of tips of tail feathers: left adult; right juvenile.

Hobby. Ageing. Pattern of upperparts: left adult; right juvenile.

Hobby. Ageing. Pattern of thighs: left adult; right juvenile.

Hobby. Ageing. Pattern of tips of primary coverts: top adult; bottom juvenile.

## MOULT

Complete **postbreeding** moult, starting in breeding sites, suspended during migration and finished in winter quarters. Partial **postjuvenile** moult in winter, involving part of body feathers and, sometimes, some tail feathers and wing coverts.

## PHENOLOGY

I	II	III	IV	V	VI	VII	VIII	IX	X	XI	XII

## STATUS IN ARAGON

Summer visitor, breeds in plain areas with open trees in low areas of the Region.

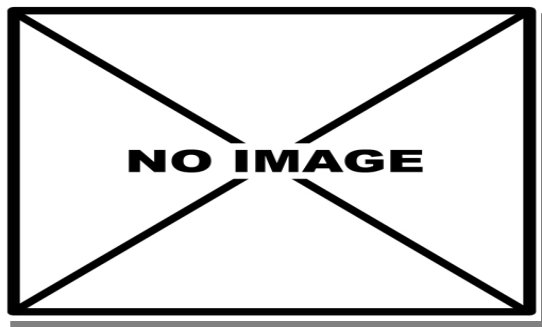

Hobby. Adult. Female (06-VIII).

Hobby. 2nd year. Male (30-IV).

Hobby. 2nd year. Female (19-IX).

Hobby. Juvenile. Male ().

Hobby. Juvenile. Female (29-XI).

Hobby. Adult.  
Head pattern:  
top male (18-  
VI); bottom  
female (06-  
VIII).
