Black-winged Stilt. Adult. Male (22-IV)

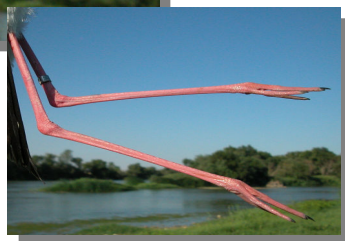

BLACK-WINGED STILT (*Himantopus himantopus*)

IDENTIFICATION

37-38 cm. White plumage except dark upperparts; usually black on head and neck; black bill; red and very long legs.

Black-winged Stilt. Pattern of head and legs.

SIMILAR SPECIES

This species is unmistakable.

SEXING

In **adult** birds, **male** with upperparts, scapulars and tertials black; wing longer than 240 mm. **Female** with upperparts, scapulars and tertials dark brown, contrasting with black wing coverts; wing shorter than 235 mm (**CAUTION:** in **breeding plumage** pattern of black colour on head is strongly variable in both sexes; in **non breeding plumage** both sexes have similar grey pattern). Sexing of **juveniles** recorded by some authors (**male** with wing coverts with metallic green gloss; **female** with wing coverts without metallic green gloss) doubtful due to overlap and must be verified.

Black-winged Stilt. Adult. Sexing. Pattern of upperparts: left male; right female.

AGEING

3 age groups can be recognized:

Juvenile with fresh plumage; feathers of upperparts, scapulars, tertials and wing coverts clearly edged buff; secondaries and inner primaries with white tips; crown greyish, never white; pale pink legs.

2nd year similar to **adult female** but with **juvenile** flight feathers, which are worn and have white tips; sometimes with **juvenile** tertials and wing coverts retained.

Adult with upperparts, scapulars, tertials and wing coverts plain black; secondaries and inner primaries without pale tips; crown white or with a black patch; deep pink legs.

Black-winged Stilt. Ageing. Pattern of head: top adult; bottom juvenile.

Black-winged Stilt. Ageing. Pattern of wing coverts: top adult; bottom juvenile.

MOULT

Complete **postbreeding** moult, suspended during migration and finished in wintering sites. Partial **postjuvenile** moult involving body feathers, some central tail feathers and all or most of lesser and median wing coverts; starts in July and finished in winter quarters. Both age classes have a partial **prebreeding** moult including body feathers, some scapulars, tertials and central tail feathers.

PHENOLOGY

I	II	III	IV	V	VI	VII	VIII	IX	X	XI	XII

STATUS EN ARAGON

Summer visitor with rare wintering birds. Breeds in rice fields and waterplaces from the Ebro Valley and Sistema Iberico.

Black-winged Stilt. Ageing. Pattern of upperparts: left adult; right juvenile.

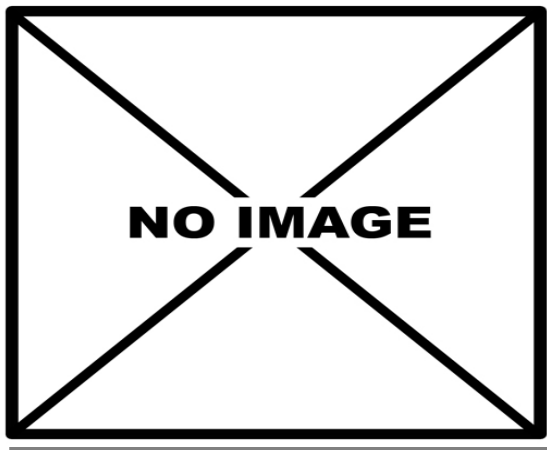

Black-winged Stilt. Ageing. Colour of legs: top adult; bottom juvenile.
