Collared Pratincole. Spring. 2nd year. Male (29-IV).

## COLLARED PRATINCOLE (*Glareola pratincola*)

### IDENTIFICACIÓN

22-25 cm. Brownish plumage; head with creamy throat and a thin black line around; wings brown above, with secondaries with white tips; underwing with reddish coverts; tail coverts white; tail very forked; black bill with reddish base.

### SIMILAR SPECIES

This species is unmistakable.

### SEXING

Both sexes with similar plumage, but **male** with black lores; **female** with brown lores. **Male** with difference between the longer and shorter tail feather bigger than 52 mm; if the difference is shorter, then can be both sexes.

Collared Pratincole. Spring. Sexing. Pattern of lores: top male; bottom female.

### AGEING

3 types of age can be recognized:

**Juvenil** with upperparts, wing and tail brown with buff tips and dark subterminal bands; head and throat streaked brown and buff; tail fork shorter than in **adult**.

**2nd year** similar to **adults**; this age can be recognized only in birds with some unmoulted inner **juvenile** secondaries.

**Adult** with upperparts, wing and tail brown; head with thin black line around the throat; without moult limit between old and new inner secondaries although can be found a limit between primaries due to suspended moult in autumn; tail fork longer than in **juvenile**.

### MOULT

Complete **postbreeding** and **postjuvenile** moults, starting in breeding areas, suspended during migration and finished in wintering quarters. Some **juvenile** birds can retain some inner secondaries. Both types of age have a **prebreeding** moult acquiring then the breeding plumage.

### PHENOLOGY

I	II	III	IV	V	VI	VII	VIII	IX	X	XI	XII

### STATUS IN ARAGON

On passage, with some scarce records in prebreeding migration in wetlands and rice fields.

Collared Pratincole. Spring. Adult. Female (29-IV).
