Little Ringed Plover. Spring. Adult. Male (08-IV).

LITTLE RINGED PLOVER (*Charadrius dubius*)

IDENTIFICACIÓN

15-18 cm. **Adult** with sandy upperparts; white underparts; black breastband, narrower on shoulders; black bar on forehead and eyes; buff wings with white tips on coverts; pink legs; black bill; yellow ocular ring. **Juvenile** without black on head and with brown and incomplete collar.

Little Ringed Plover. Spring. Pattern of wing and the black bars on head

Little Ringed Plover. Juvenile

SIMILAR SPECIES

Recalls a **Ringed Plover** which in spring has orange base of bill and without yellow eye ring; in all plumages with a pale bar on wing. **Kentish Plover** has dark legs and lacks black band on forehead. **Juvenile Ringed Plover** has a white supercilium and breastband in **juvenile Kentish Plover** is only a little patch on breast.

SEXING

In **spring**, **male** with dark bands on head and breast pure black; central tail feathers with sub-terminal dark areas; prominent eye-ring. **Female** with dark bands on head and breast with some brown feathers; central tail feathers with sub-terminal dark brown areas; eye-ring slightly prominent (**CAUTION**: differences are sometimes subtle and some birds cannot be sexed). In **autumn**, differences in sexual characteristics related with plumage are attenuated after **postbreeding** moult, but extreme birds can be sexed. **Juveniles** cannot be sexed using plumage pattern.

Little Ringed Plover. Autumn. Sexing. Pattern of head: top male; bottom female

Little Ringed Plover. Spring. Sexing. Pattern of head: top male; bottom female

Little Ringed Plover. Autumn. Sexing. Pattern of crown: left male; right female.

Little Ringed Plover. Spring. Sexing. Pattern of crown: left male; right female.

Little Ringed Plover. Autumn. Sexing. Pattern of Breast: top male; bottom female

AGEING

3 age groups can be recognized:

Juvenile with feathers of upperparts and wing coverts sandy with pale edges; brown breastband, usually incomplete; central tail feathers with buff tips; without active moult of primaries in **autumn**.

2nd year spring can retain some **juvenile** feathers on upperparts, rump and wing coverts; recognizable by worn primaries and larger numbers of brown feathers on breastband than **adults**.

Adult in **spring** with worn wing coverts, without buff edges; black breastband or with some brown feathers; central tail feathers without broad buff tips. In **autumn** similar to **juveniles**, but with active moult on flight feathers; the new wing coverts in **adults** have buff edges; dark pattern on head and breast slightly marked; central tail feathers without broad buff tips.

MOULT

Complete **postbreeding** moult starting in breeding sites, suspended before migration and finished in winter quarters. Partial **postjuvenile** moult including most of body feathers (some **juvenile** feathers retained on upperparts and rump), wing coverts (some retained), some tail feathers and inner secondaries; outer secondaries and primaries unmoulted; starting in August and finished in wintering sites. Both age classes have a **prebreeding** moult involving most of body feathers, scapulars, tertials and wing coverts.

PHENOLOGY

I	II	III	IV	V	VI	VII	VIII	IX	X	XI	XII

STATUS EN ARAGON

Summer visitor, breeds on gravelly near the Ebro river and its tributaries.

Little Ringed Plover. Autumn. Ageing. Pattern of wing coverts: left adult; right juvenile

Little Ringed Plover. Spring. Adult. Female (28-IV).

Little Ringed Plover. Autumn. Ageing. Pattern of tips of central tail feathers: left adult; right juvenile.

Little Ringed Plover. Spring. 2nd year. Male (28-IV).
