

**05460 Common Redshank** (*Tringa totanus*)

Redshank. Spring. Adult (02-V)

**COMMON REDSHANK** (*Tringa totanus*)

**IDENTIFICATION**

27-28 cm. In **spring** with brownish upperparts barred dark; white rump; white tail with dark bars; wings with a broad white band on the edge; white underparts with dark streaks on head, neck and breast; red bill with dark tip; orange-red legs. In **autumn** with darker colours on upperparts: grey tinge on breast.

Redshank. Pattern of wing, tail and bill.

**SIMILAR SPECIES**

Recalls a **Spotted Redshank** in **autumn**, without a white patch on wings and has a longer bill; **Ruff** has a narrower wing band and two white bands on sides of uppertail

Spotted Redshank. Autumn

Ruff

**SEXING**

Plumage of both sexes alike.

**AGEING**

This species is a scarce **breeder** in Aragon, so only 3 age classes can be recognized:

**1st year autumn** with fresh plumage; median coverts spotted pale on edge; tertials brown with buff and dark marks; pointed tail feathers; breast slightly streaked; dull reddish base of bill; yellowish legs.

**2nd year spring** similar to **adult**; this age can be recognized only in birds with some unmoulted median wing coverts and/or tertials; flight feathers moderately worn.

**Adult** with median coverts with whitish edge and dark subterminal band; tertials grey brown with variable markings: either plain or with dark sepia bars, sometimes with extensive dark markings; rounded tail feathers; underparts with variable amount of dark barring and spotting; reddish legs and base of bill.

Redshank. Ageing. Pattern of bill: top adult; bottom 1st year.

**05460 Common Redshank** (*Tringa totanus*)

Redshank. Ageing. Pattern of legs: top adult; bottom 1st year.

Redshank. Ageing. Pattern of tertials: left adult in spring; right 1st year.

**MOULT**

Complete **postbreeding** moult, starting in breeding areas and finished in wintering sites. Partial **postjuvenile** moult involving body feathers, most scapulars, some tail feathers (occasionally all), some tertials and some lesser and median wing coverts; started in breeding areas and finished in wintering quarters. Both age classes have a **prebreeding** moult including all or part of body feathers, some scapulars, tertials, wing coverts and sometimes some tail feathers.

**PHENOLOGY**

I	II	III	IV	V	VI	VII	VIII	IX	X	XI	XII

- Summer visitor      ■ Resident
- Wintering            ■ On passage
