Goldcrest. Adult. Male (04-XII).

GOLDCREST (*Regulus regulus*)

IDENTIFICATION

8-10 cm. **Adults** with green-yellowish plumage; head with crown yellow (**female**) or orange (**male**); grey face. **Juvenile** without crest on the crown.

Goldcrest. Adult. Pattern of head.

Goldcrest. Juvenile. Pattern of head.

SIMILAR SPECIES

Firecrest has similar crown pattern, but head with white and black bands on the face; **Juvenile Firecrest** has a whitish supercilium.

Firecrest. Adult.

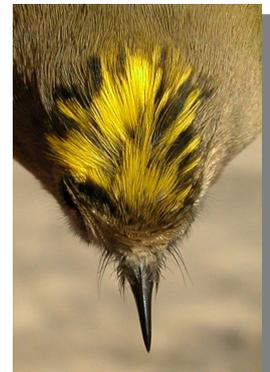

Firecrest. Juvenile.

SEXING

Male with crown patch bright orange with yellow at the edges; wing longer than 56 mm. **Female** with crown patch yellow, sometimes with some orange; wing shorter than 49 mm (**CAUTION:** some **females** can show limited hint of orange that is not very glossy). **Juveniles** cannot be sexed using plumage pattern.

Goldcrest. Adult. Sexing. Pattern of crown: left male; right female.

AGEING

3 age groups can be recognized:

Juvenile without crest on crown; fresh plumage.

1st year autumn/2nd year spring with most of the wing feathers unmoulted; central alula feather, if unmoulted, lacks green edge; tail feathers with very pointed tips.

Adult with central alula feather with green edge; tail feathers with not very pointed tips or rounded.

CAUTION: shape of tail feathers is not always usable due to overlap.

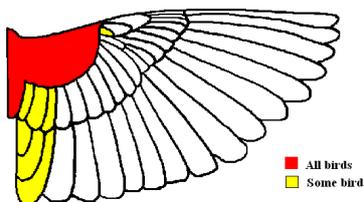

Goldcrest. Ageing. Pattern of crown: left adult; right juvenile.

Goldcrest. Ageing. Pattern of tips of the tail feathers: left adult with rounded tips; middle adult with pointed tips; right juvenile.

MOULT

Complete **postbreeding** moult, usually finished in October. Partial **postjuvenile** moult involving body feathers, lesser and median coverts and some or all tertials, but usually not greater coverts; generally finished in October.

Goldcrest. Extent of postjuvenile moult.

PHENOLOGY

I	II	III	IV	V	VI	VII	VIII	IX	X	XI	XII

STATUS IN ARAGON

Resident. Breeds in forests from the Pyrenees and Sistema Iberico, wintering in lower areas.

Goldcrest. Adult. Female (04-XI).
