Golden Oriole. Adult. Male (24-VI).

EURASIAN GOLDEN ORIOLE (*Oriolus oriolus*)

IDENTIFICATION

22-25 cm. **Male** with deep yellow body and black wings and tail. **Female** and **juveniles** quite similar, with green olive upperparts and greyish underparts with diffuse streaked; wing and tail brownish; in **adults** bill and eye reddish.

SIMILAR SPECIES

This species is unmistakable.

MOULT

Very variable partial **postbreeding** moult, involving generally body feathers, some inner wing coverts and may also include some inner secondaries and tertials; usually finished in September. Partial **postjuvenile** moult including body feathers, lesser coverts, some inner median and greater coverts and sometimes tertials. Both age classes have a complete **prebreeding** moult in their wintering quarters, sometimes retaining some unmoulted secondaries or tail feathers.

Golden Oriole. Extent of postjuvenile moult.

PHENOLOGY

I	II	III	IV	V	VI	VII	VIII	IX	X	XI	XII

STATUS IN ARAGON

Summer visitor. Widely distributed throughout all forests of the Region, absent from the Pyrenees.

AGEING AND SEXING

4 age groups can be recognized:

Juvenil and **1st year** with fresh plumage; upperpart and wing coverts brown-olive with yellow edges; underparts distinctly streaked; loral stripe dull grey; bill dark brown; iris dark brown; central tail feathers with pointed tips.

Juveniles and **1st year** birds cannot be sexed using plumage pattern.

2nd year males and **females** have **juvenile-like** plumage with underparts always streaked; central tail feathers with rounded tips; iris reddish. **Males** usually with primary coverts with pale tip about 1-10 mm; outermost tail feather with yellow patch on tip about 24-35 mm; malar stripe yellow. **Females** with primary coverts with pale tips about 1-5 mm; outermost tail feather with yellow patch on tip about 17-28 mm; malar stripe pale (**CAUTION:** intermediate birds are very common).

Adult female with dark grey loral stripe; usually with greyish-white underparts sparsely streaked and pale malar stripe; more rarely some **females** with **male-like** pattern with yellowish underparts only diffusely streaked and yellowish malar stripe; differs from **2nd year males** by their pale loral stripe (except **male-like** ones); upperparts with greenish tinge; **adult females** are different from **2nd year females** by their primary coverts with larger white-yellowish patch on tips (5-10 mm) and more diffuse streaked on underparts.

Adult male unmistakable with body feathers deep yellow; unstreaked underparts; loral stripe black; central tail feathers black till the base or almost; wing feathers black; outermost tail feather with large yellow patch on tip (26-38 mm); black primary coverts with large yellow patches on tips (7-16 mm).

Golden Oriole. Ageing and sexing. Adult. Pattern of head: top male; middle female; bottom male-like female.
